Playback

This page explains how to play back recordings.

Firstly, ensure you have a working connection as on the Set up page

> Do not click on anything else while a recording is playing back. It may halt the playback!

The good way

This is the recommended way of finding recordings to play back.

1. At the top of the OrganAssist screen, click *Library*
2. A new Library window will open. You will see a list of recordings currently in the library, along with full information.
3. Click one to select it, and then click the green *Play* button at the bottom of the screen.

The quick way

There is also a shortcut way to play a single recording.

1. At the bottom of the OrganAssist screen, there is a drop-down scroll box. Click this and scroll through to find the recording by its title alone.
2. Click one to select it, and then click the green *Play* button at the bottom of the screen.
